PROJECT WIREFRAME

UNT Lost & Found

A mobile app for reporting, finding and returning lost items

TEAM

Find my – Mufaro Ngwenya, Raul Karki, Jakolby King, Osaivbie, Obaje

COURSE

CSCE 3444 · UI Design Submission

DATE

26 September 2026

Design system

Shared rules used on all 11 screens.

COLOR

Aa

UNT Green #00693A
Text contrast 6.8:1

Aa

Dark Gray #1F2933
Text contrast 14.8:1

Aa

White #FFFFFF
Text contrast 14.8:1

Aa

Green Tint #E3F1E8
Text contrast 12.7:1

Aa

Alert Yellow #FFF1B8
Text contrast 13.0:1

TYPE

Helvetica Bold - titles and buttons

Helvetica Regular - labels, fields, body text (minimum 16 px in the live app)

COURIER BOLD - status tags and section labels

STATUS TAGS (text + icon, never color alone)

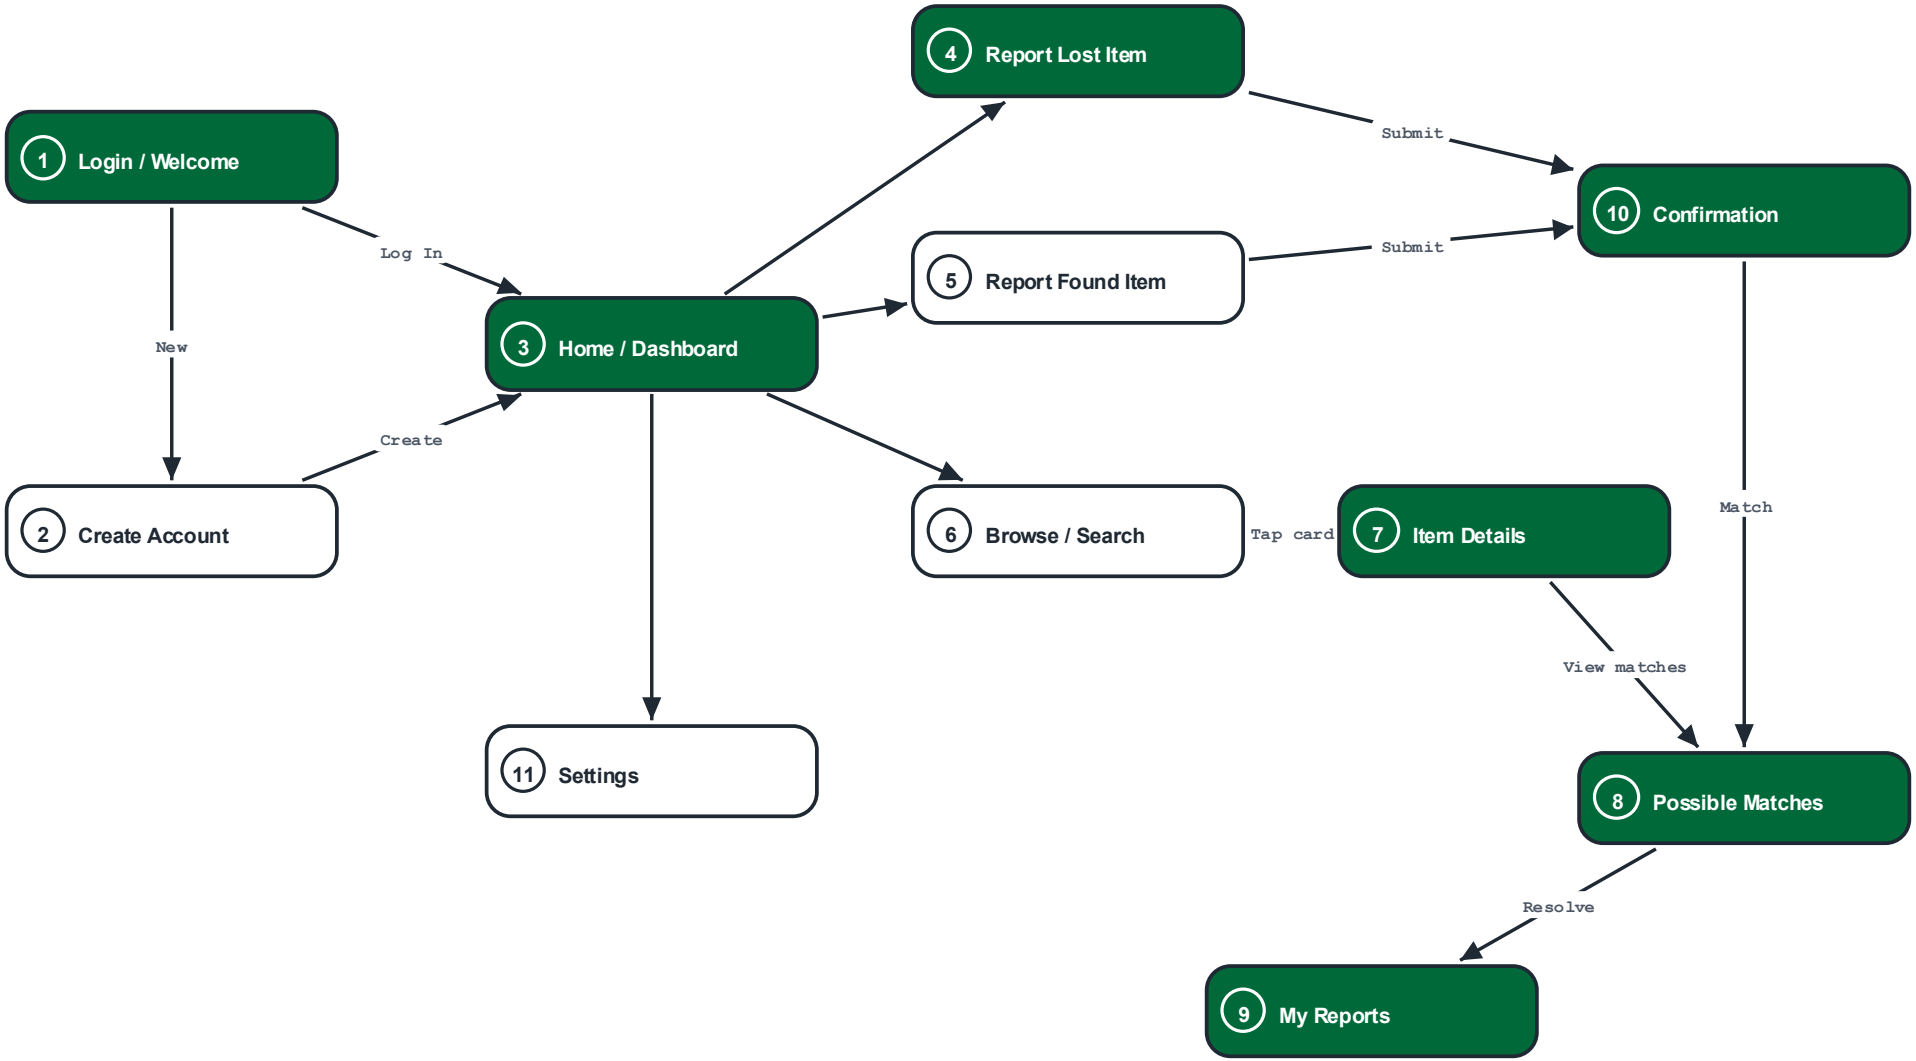

LOST FOUND ACTIVE RESOLVED

COMPONENTS

- Buttons: 44 px minimum height, rounded corners, one primary button per screen.
- Fields: visible label above every field, * for required, hint text below.
- Cards: rounded, thin dark outline, photo placeholder with a crossed box.
- Navigation: back button top left; bottom bar with Home, Browse, Matches, Reports, Settings on main screens.
- Feedback: success checkmark, yellow notice boxes with an icon, and text error messages.

Prototype flow

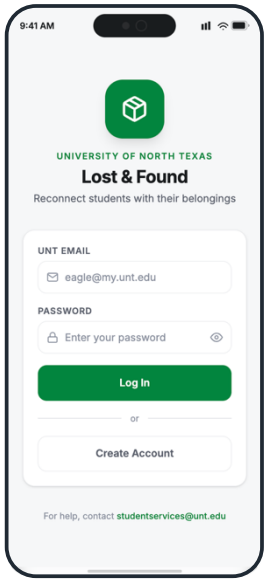

Login > Home > features > Item Details > Possible Match > Confirmation / Resolved

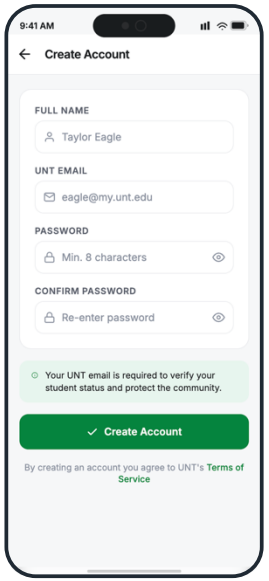

Green boxes = main happy path. The bottom navigation bar also reaches Home, Browse, Matches, Reports and Settings from any main screen.

Final app screens

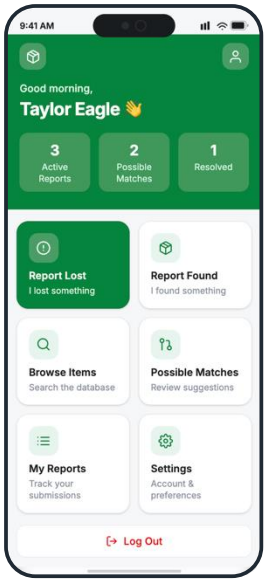

Screenshots of the built prototype, in flow order.

SCREEN 01

Login / Welcome

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Entry point. Students sign in with their UNT email; new students can create an account.

ON THE SCREEN

- Logo and app name at the top for instant recognition
- UNT email field with a domain hint; password field with a show-password option
- Log In (primary) and Create Account (secondary) buttons

NAVIGATION

Log In > 03 Home. Create Account > 02 Create Account.

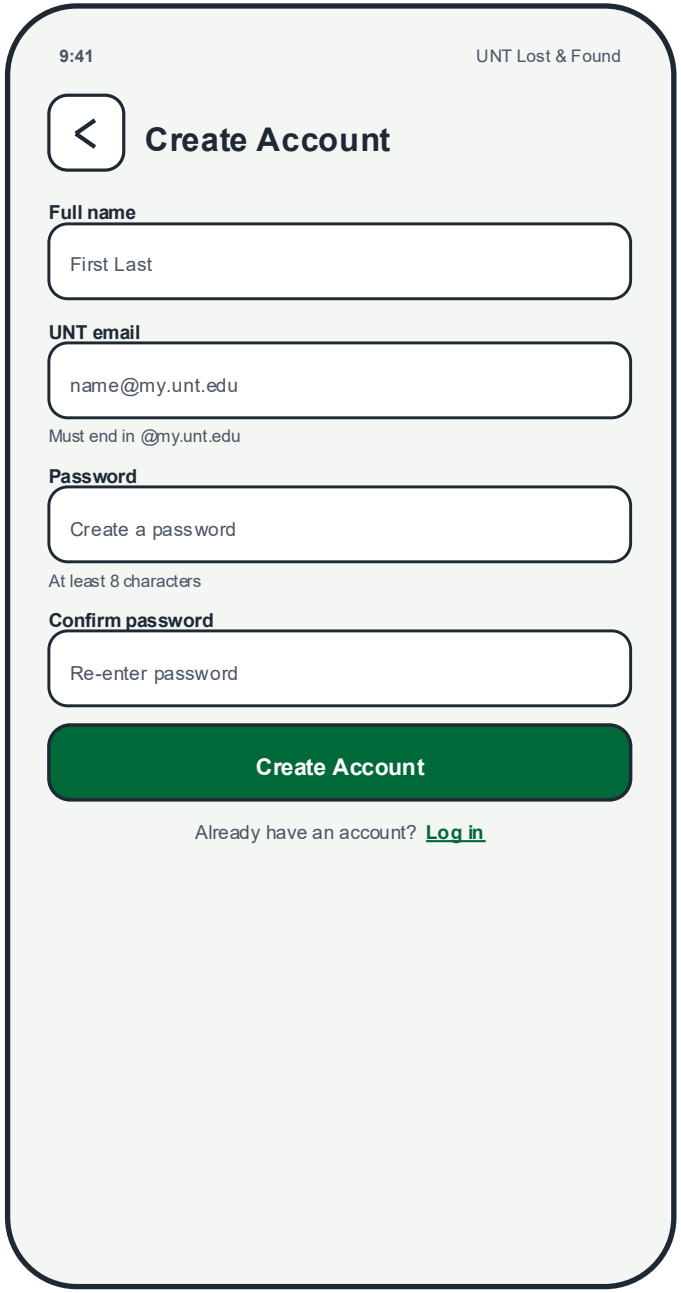

UX AND ACCESSIBILITY

Labels stay visible above every field (recognition over recall). The @my.unt.edu hint prevents wrong-address errors. Inline error text sits under the field, e.g. "Enter a valid UNT email."

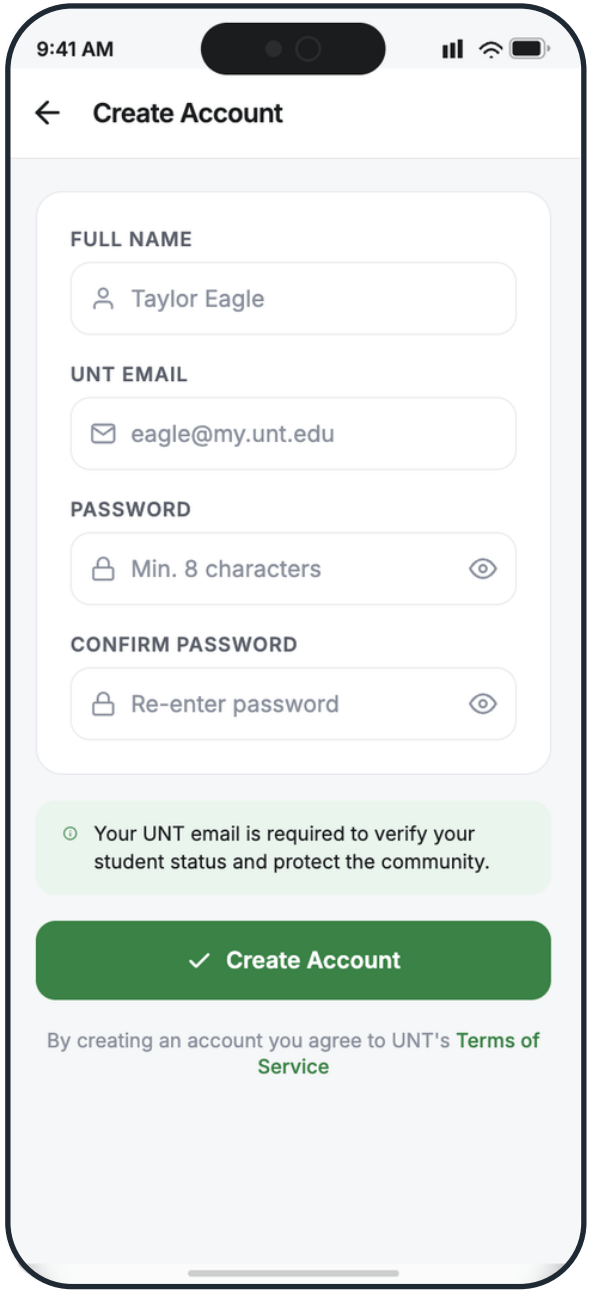

SCREEN 02

Create Account

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Lets a new student register with a verified UNT email.

ON THE SCREEN

- Full name, UNT email, password, confirm password
- Password rule shown before typing, not after failing
- Single primary Create Account button

NAVIGATION

Create Account > 03 Home. Back or Log in > 01 Login.

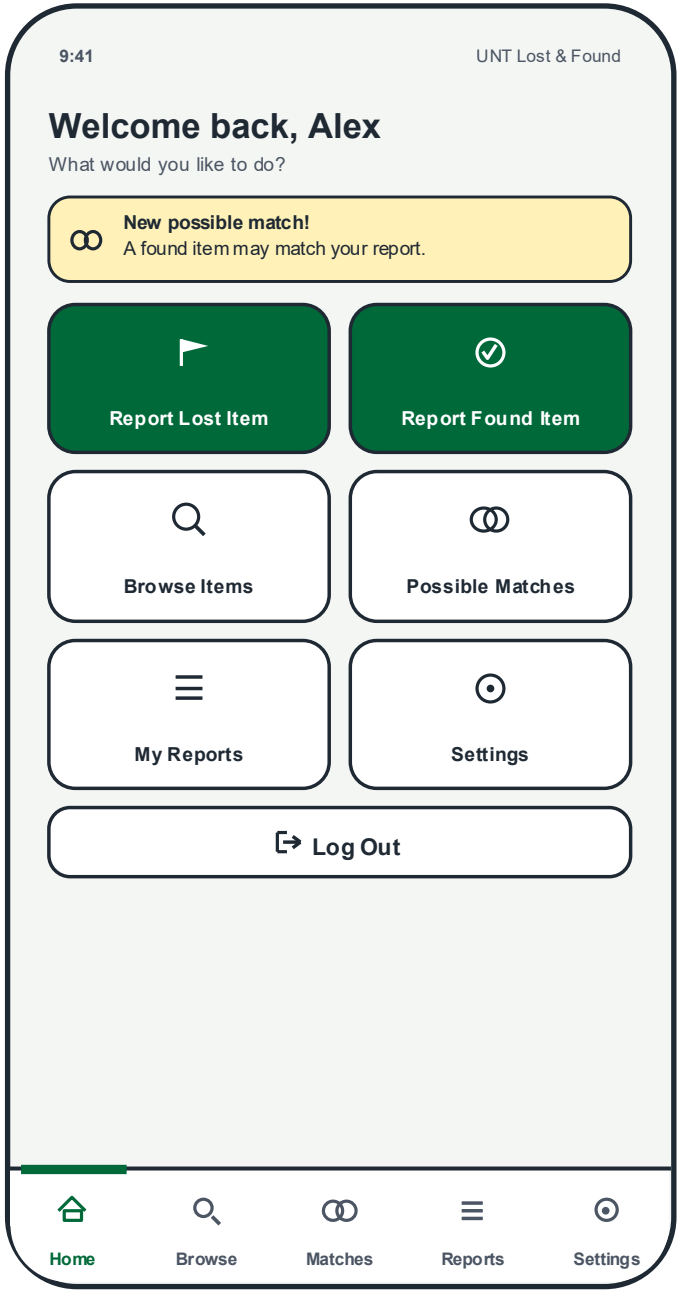

UX AND ACCESSIBILITY

Error prevention: rules are visible up front. Feedback: mismatched passwords show a text message plus an icon beside the confirm field.

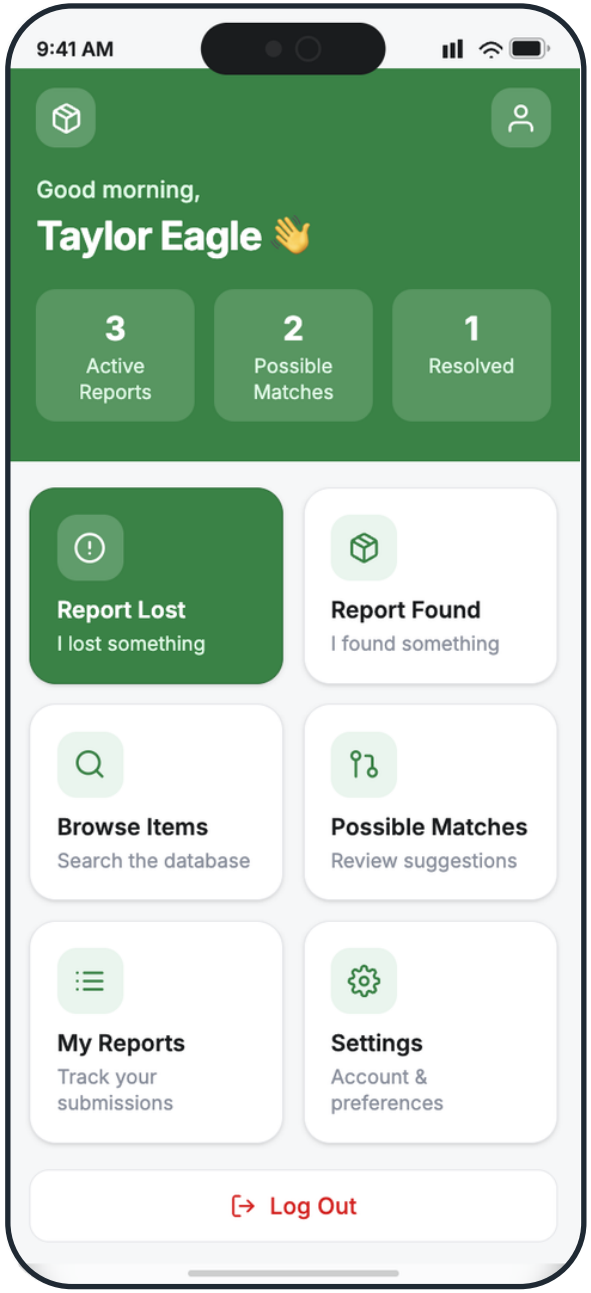

SCREEN 03

Home / Dashboard

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Central hub. Every major function is one tap away.

ON THE SCREEN

- Welcome message and an alert when a possible match exists
- Six large buttons: Report Lost Item, Report Found Item, Browse Items, Possible Matches, My Reports, Settings
- Log Out button and persistent bottom navigation

NAVIGATION

Report Lost > 04. Report Found > 05. Browse > 06. Possible Matches > 08. My Reports > 09. Settings > 11. Log Out > 01.

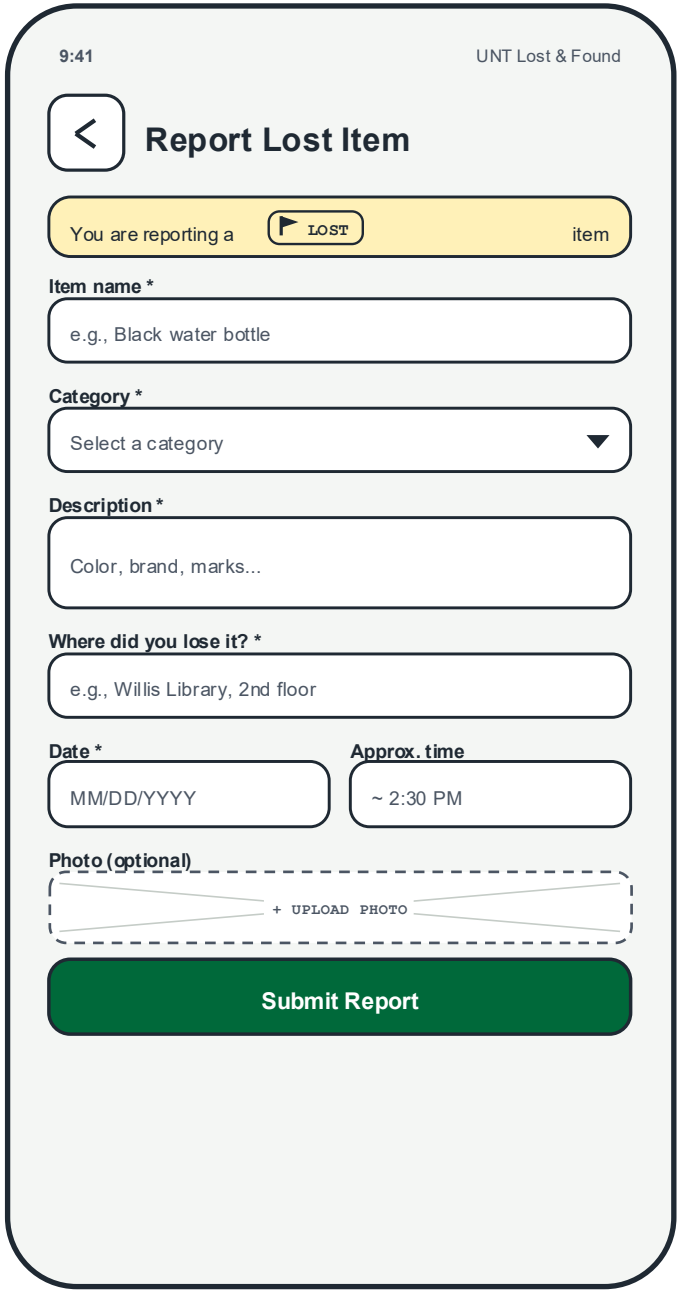

UX AND ACCESSIBILITY

Large 44px+ targets and icon + text on every button. Lost and Found actions are visually primary because they are the two most common tasks.

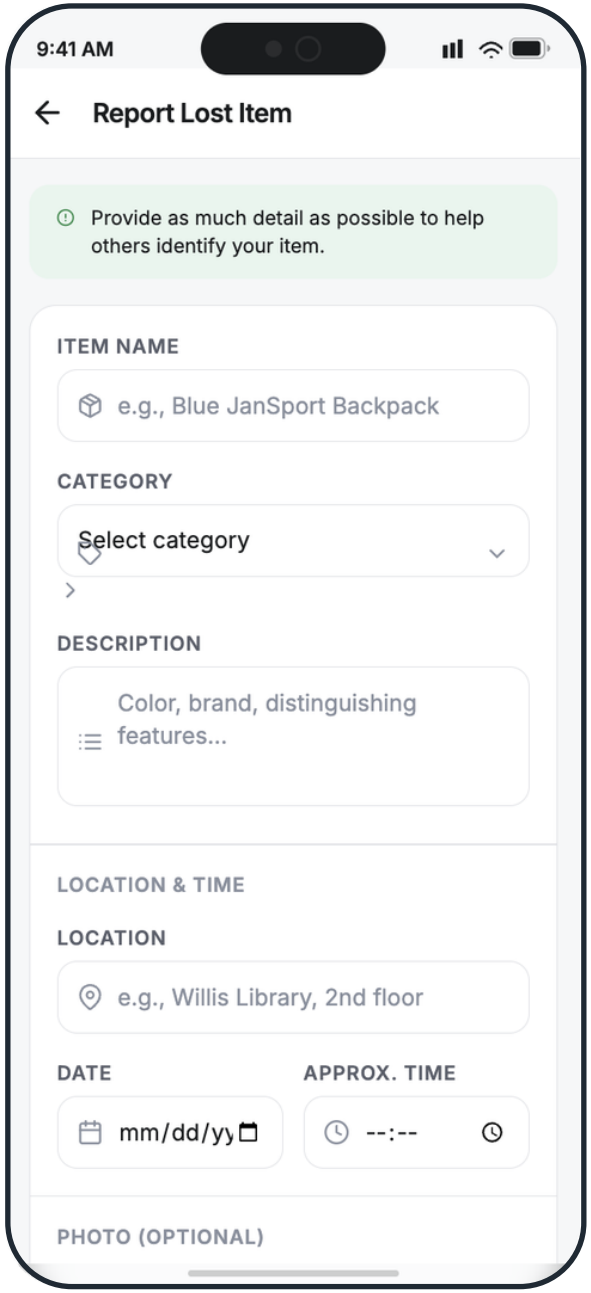

SCREEN 04

Report Lost Item

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Collects the details needed to help others recognize and match a lost item.

ON THE SCREEN

- Banner and tag clearly say this is a LOST report
- Item name, category, description, location, date, approximate time
- Optional photo upload; Submit Report button

NAVIGATION

Submit Report > 10 Confirmation. Back > 03 Home.

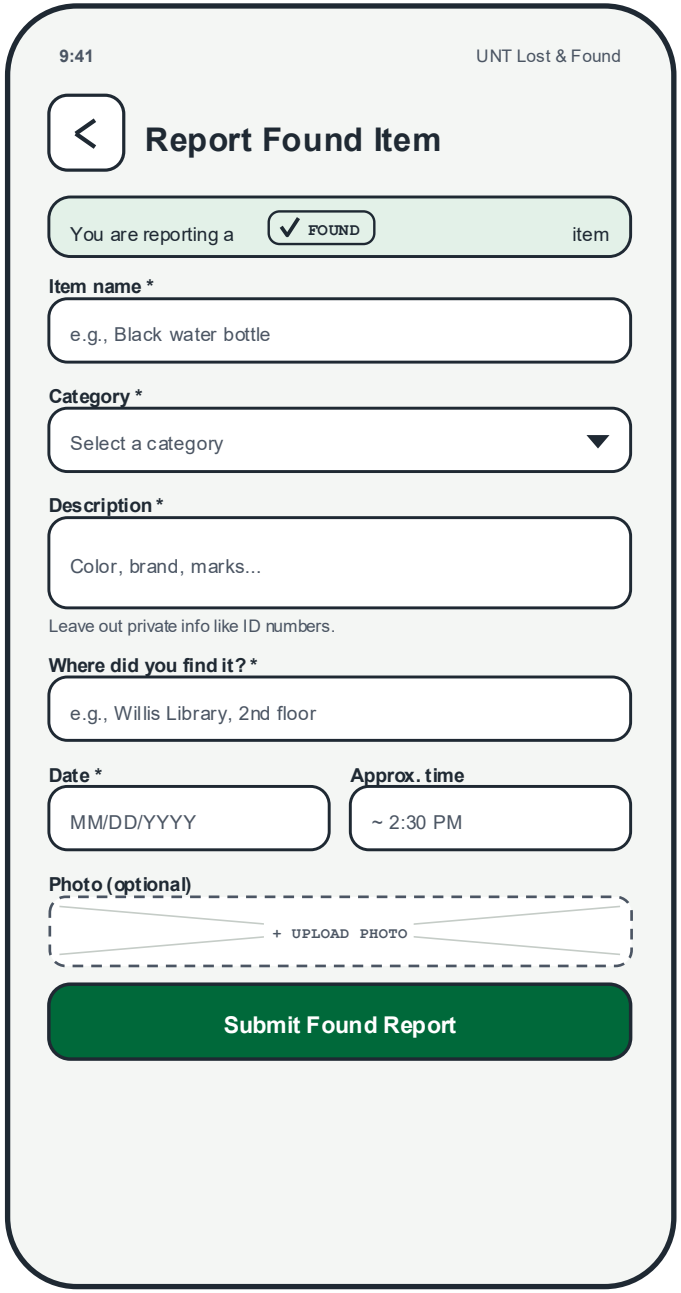

UX AND ACCESSIBILITY

Required fields are marked with *. Location wording is specific ("Where did you lose it?"). Date and time are separate fields to limit ambiguity.

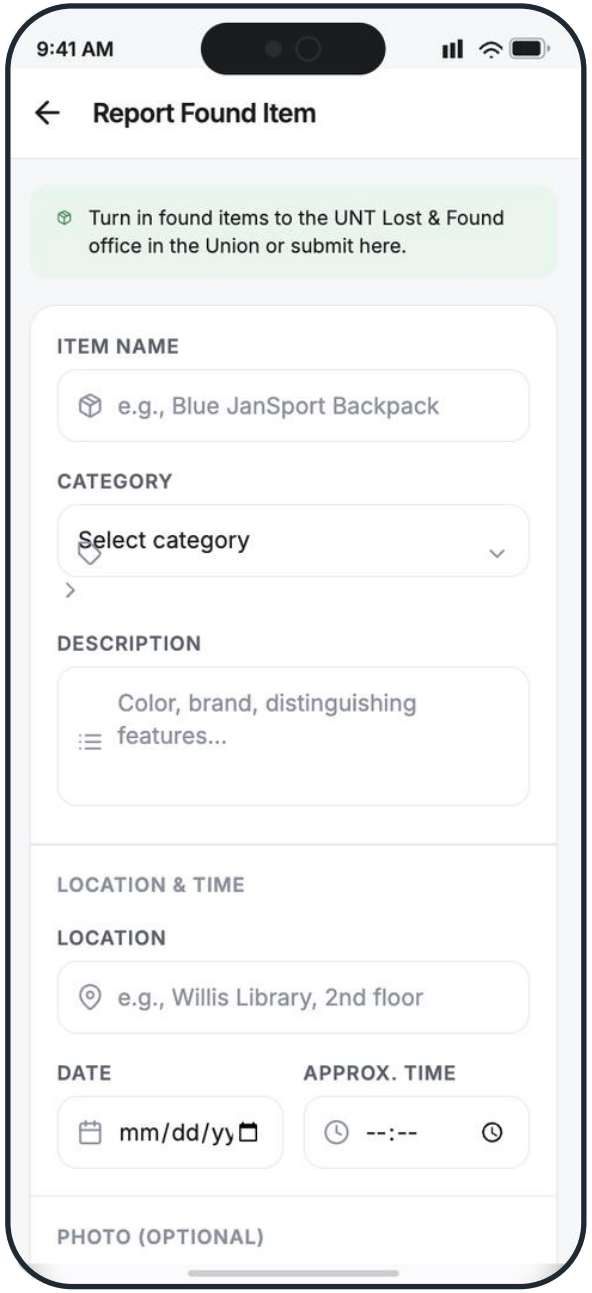

SCREEN 05

Report Found Item

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Same form as Lost, clearly labeled so the two reports are never confused.

ON THE SCREEN

- Banner and tag clearly say FOUND
- Wording changes to "Where did you find it?"
- Privacy tip: leave out ID numbers so the owner can verify the item

NAVIGATION

Submit Found Report > 10 Confirmation. Back > 03 Home.

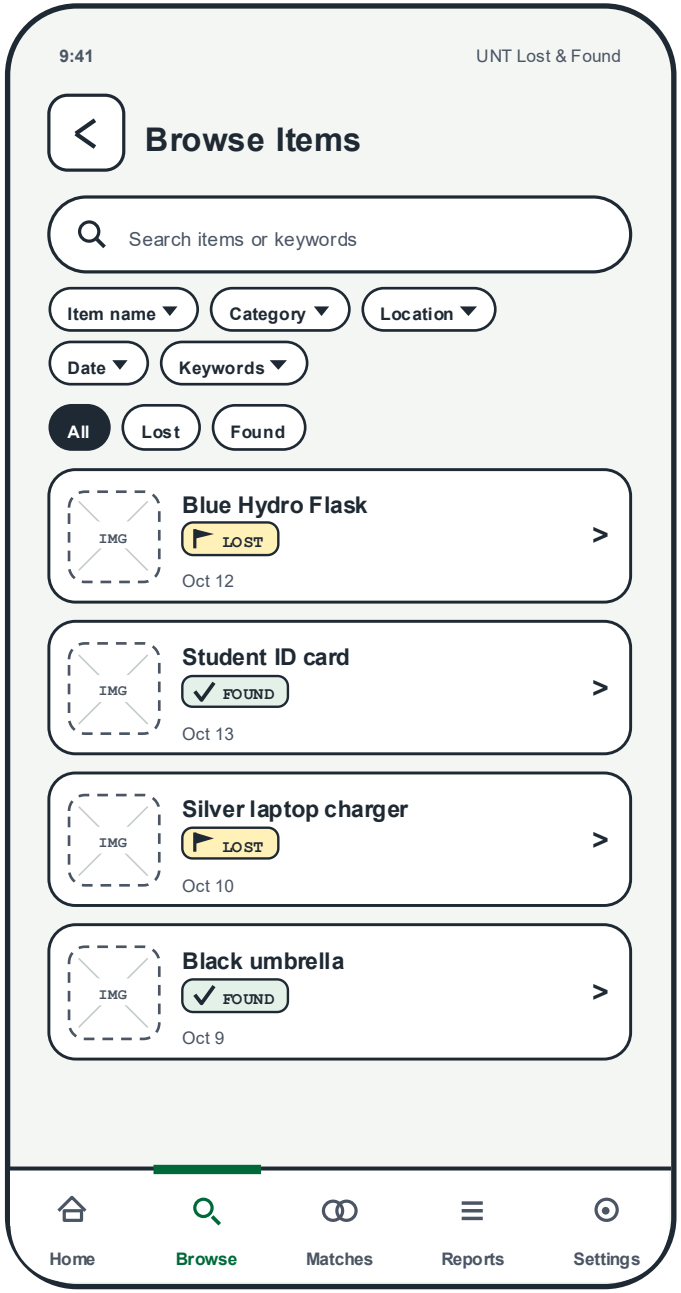

UX AND ACCESSIBILITY

Different banner color, tag icon, and button text keep Lost and Found distinct without relying on color. The privacy hint prevents sensitive data from being posted.

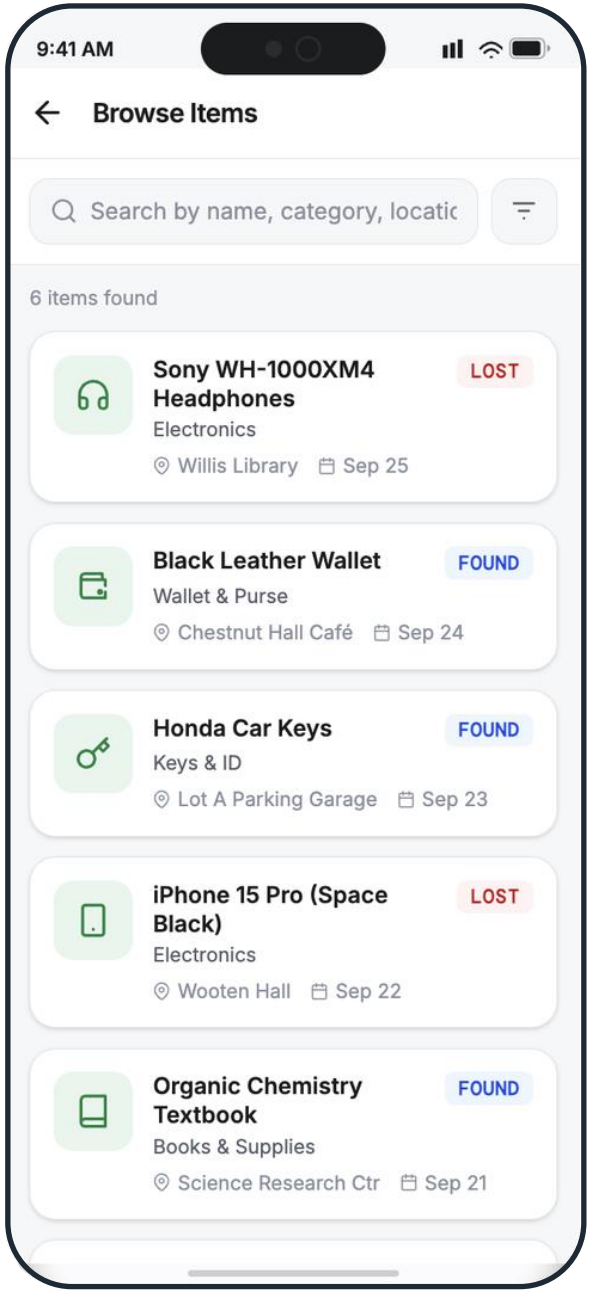

SCREEN 06

Browse / Search

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Lets students scan every active report and narrow the list.

ON THE SCREEN

- Search bar plus filters: item name, category, location, date, keywords
- All / Lost / Found toggle
- Item cards with photo placeholder, name, status tag, and date

NAVIGATION

Tap any card > 07 Item Details.

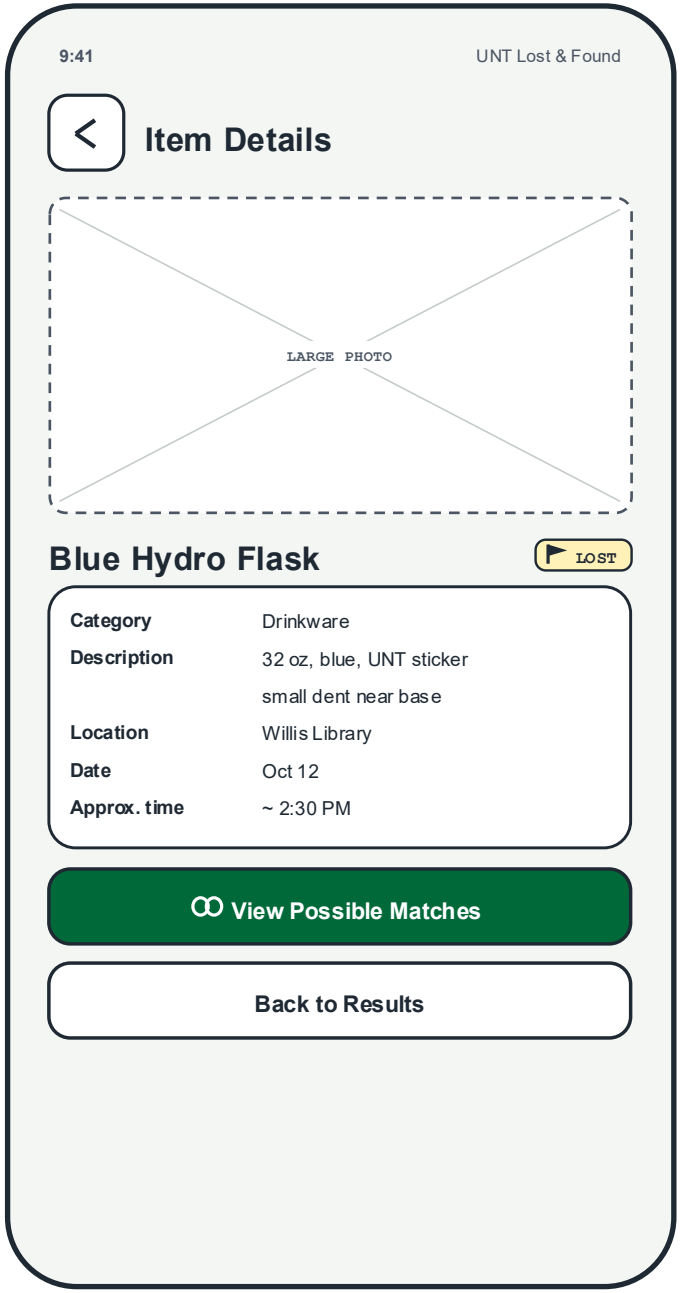

UX AND ACCESSIBILITY

Filters are always visible so students do not have to remember options. Each card repeats status as text plus icon, and the selected filter is filled and bold.

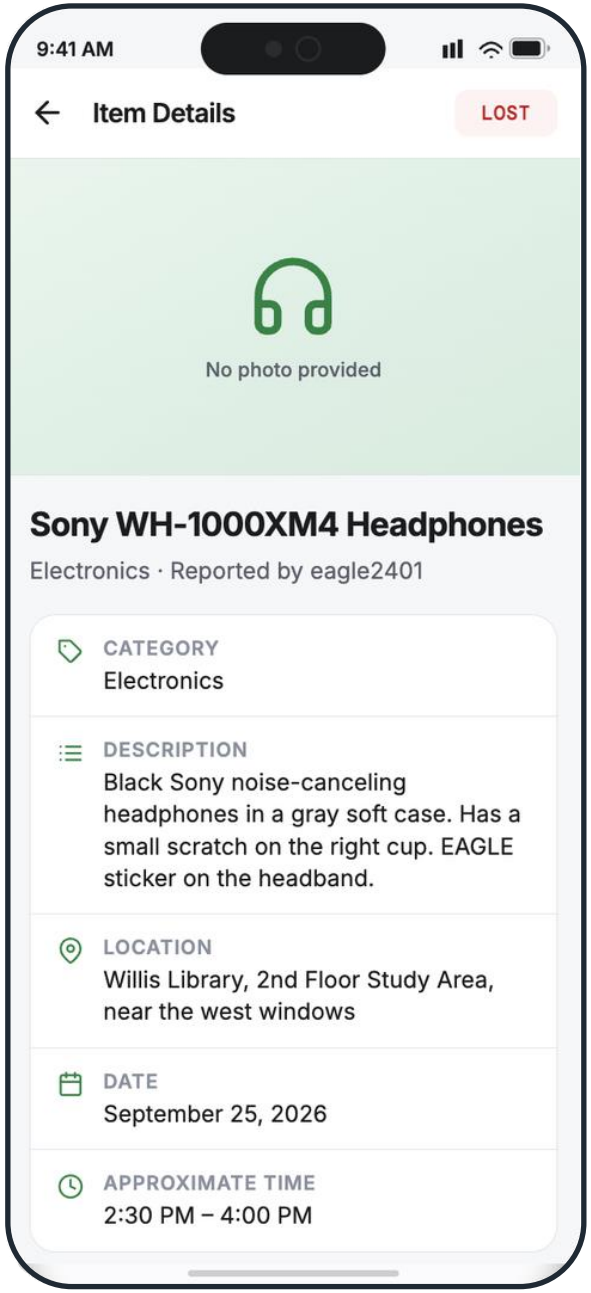

SCREEN 07

Item Details

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Full information for a single report.

ON THE SCREEN

- Large photo placeholder, item name, LOST or FOUND tag
- Category, description, location, date, approximate time
- View Possible Matches button; Back to Results

NAVIGATION

View Possible Matches > 08. Back to Results > 06.

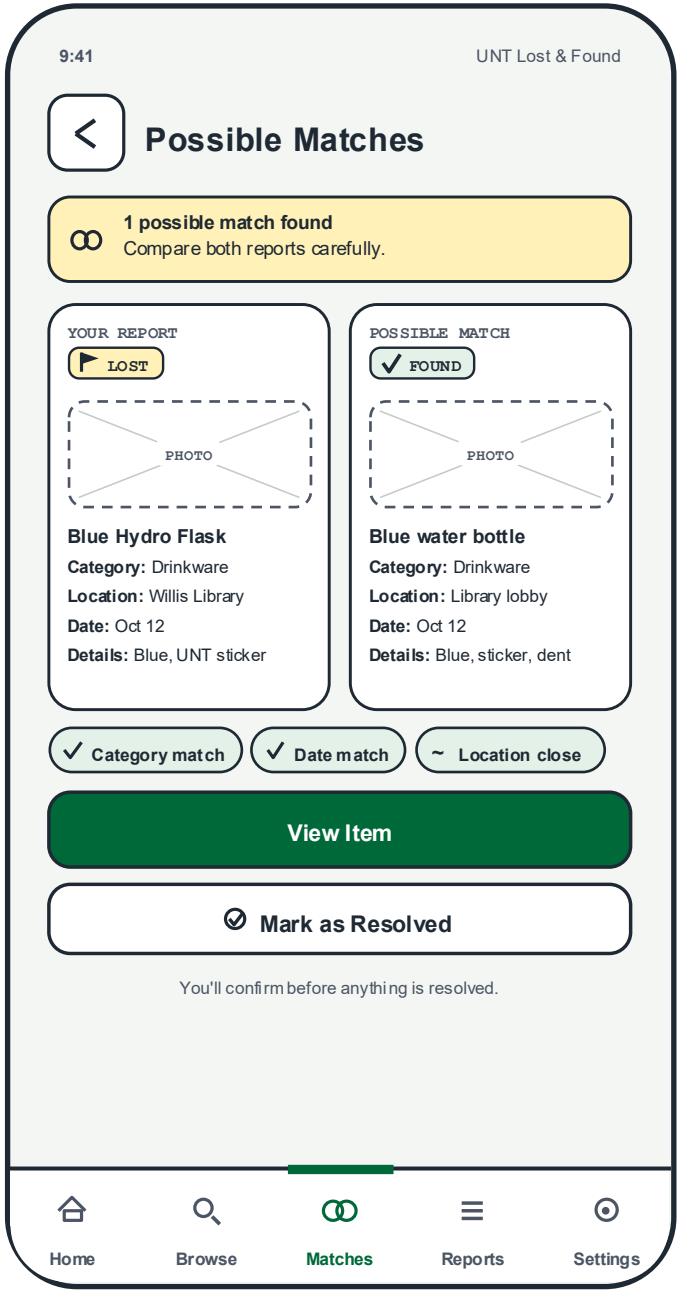

UX AND ACCESSIBILITY

The most important action sits directly below the details. Details use a two-column label/value layout for quick scanning.

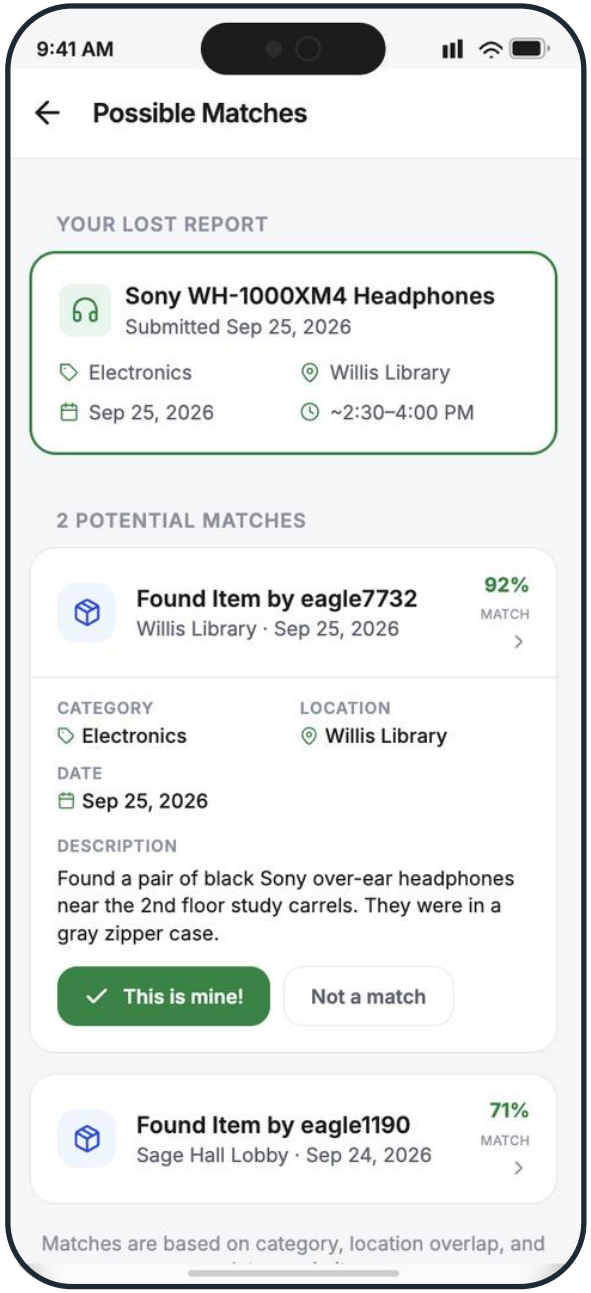

SCREEN 08

Possible Matches

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Compares the student's report with a potential match side by side.

ON THE SCREEN

- Left: your report. Right: possible match, each with tag and photo
- Category, location, date, and description shown for both
- Match indicators (match / close) as text plus icon
- View Item and Mark as Resolved buttons

NAVIGATION

View Item > 07. Mark as Resolved > 09 My Reports (status becomes RESOLVED).

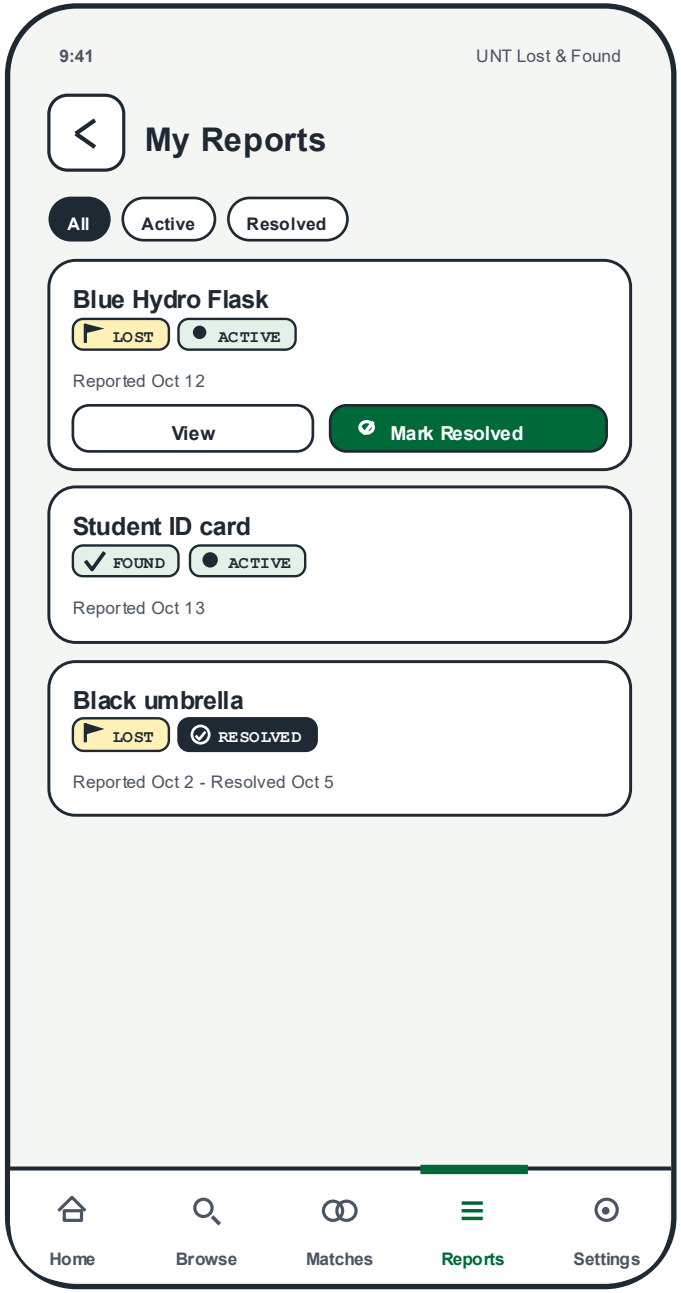

UX AND ACCESSIBILITY

Side-by-side layout supports comparison without memorizing. A confirmation step before resolving prevents accidental closure.

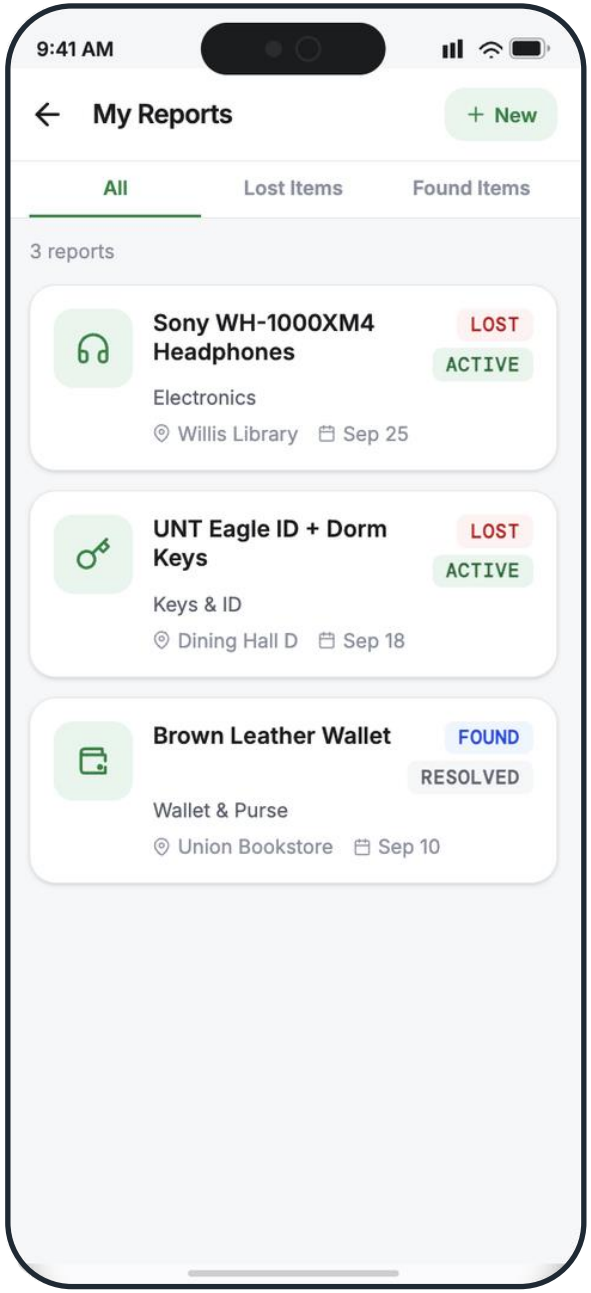

SCREEN 09

My Reports

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Lets students manage everything they have submitted.

ON THE SCREEN

- Cards with item name, report type, date
- ACTIVE or RESOLVED label with an icon on every card
- All / Active / Resolved filter; View and Mark Resolved actions

NAVIGATION

View > 07. Mark Resolved updates the card to RESOLVED.

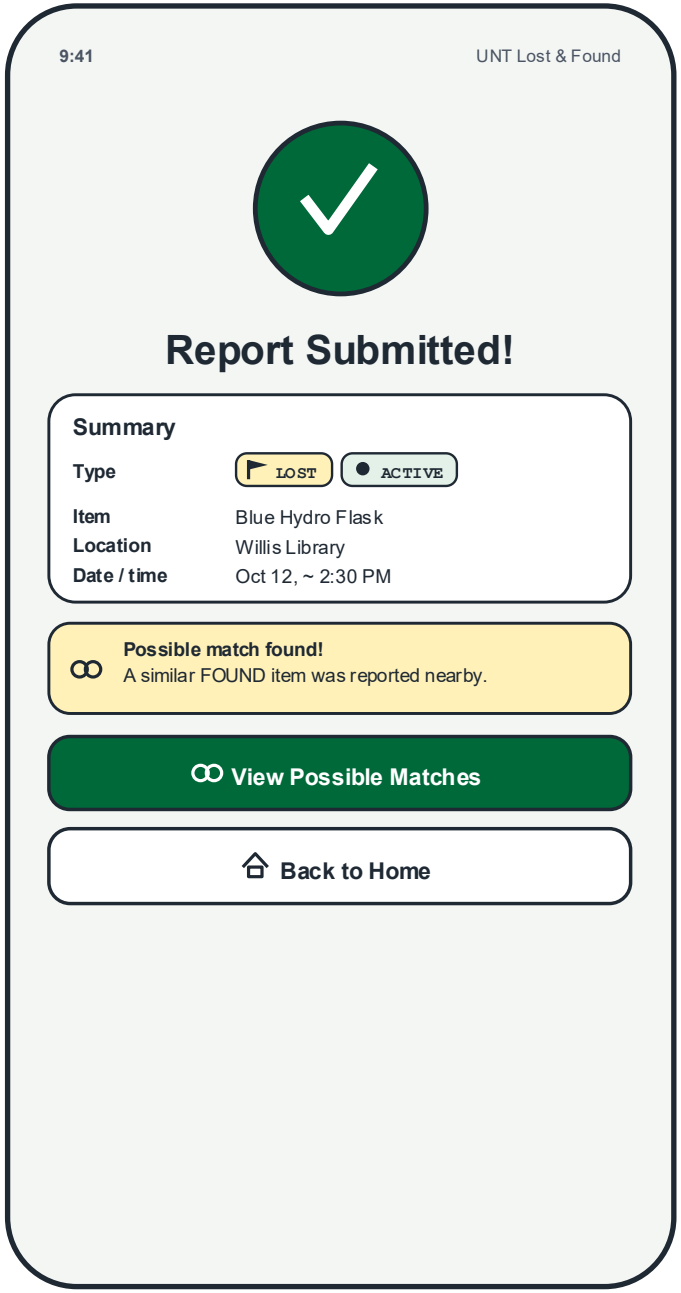

UX AND ACCESSIBILITY

Status is shown as an icon and a word, so it works for color-blind users. Resolved cards drop the action buttons to reduce clutter.

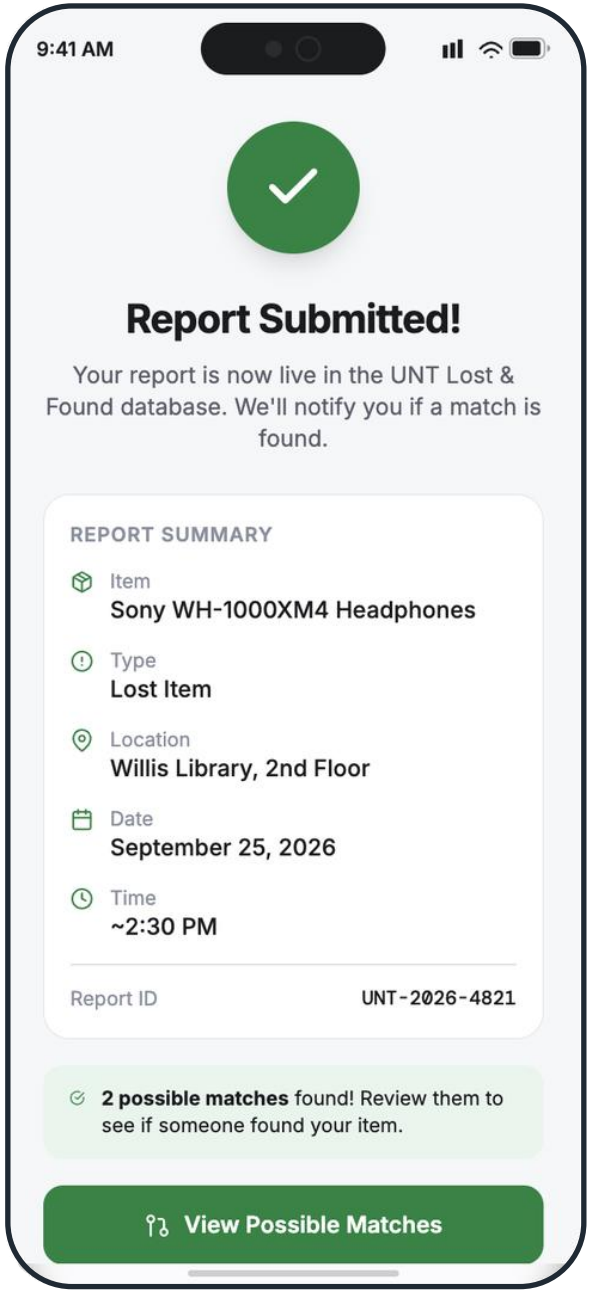

SCREEN 10

Confirmation

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Clear feedback after a report is submitted.

ON THE SCREEN

- Success checkmark and "Report Submitted!" message
- Summary of the report: type, item, location, date and time
- Possible match notification
- View Possible Matches and Back to Home buttons

NAVIGATION

View Possible Matches > 08. Back to Home > 03.

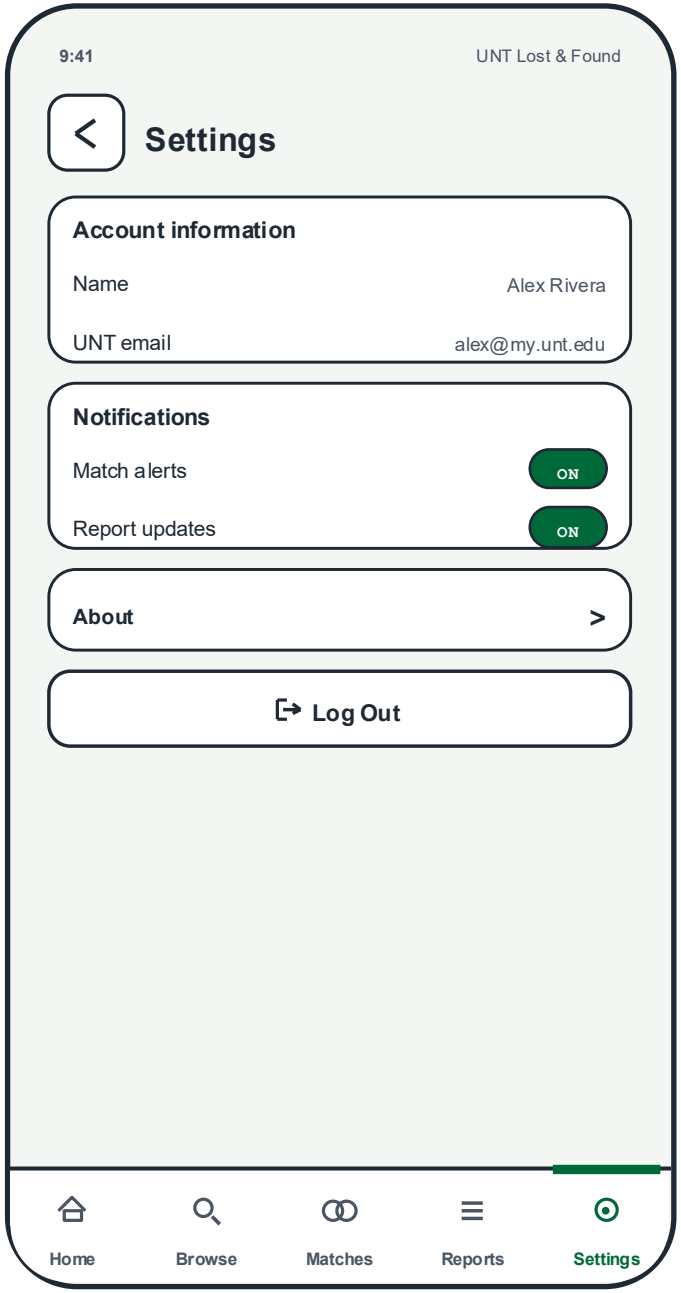

UX AND ACCESSIBILITY

Immediate feedback with a recap lets students verify what they sent. The match alert turns a completed task into a next step.

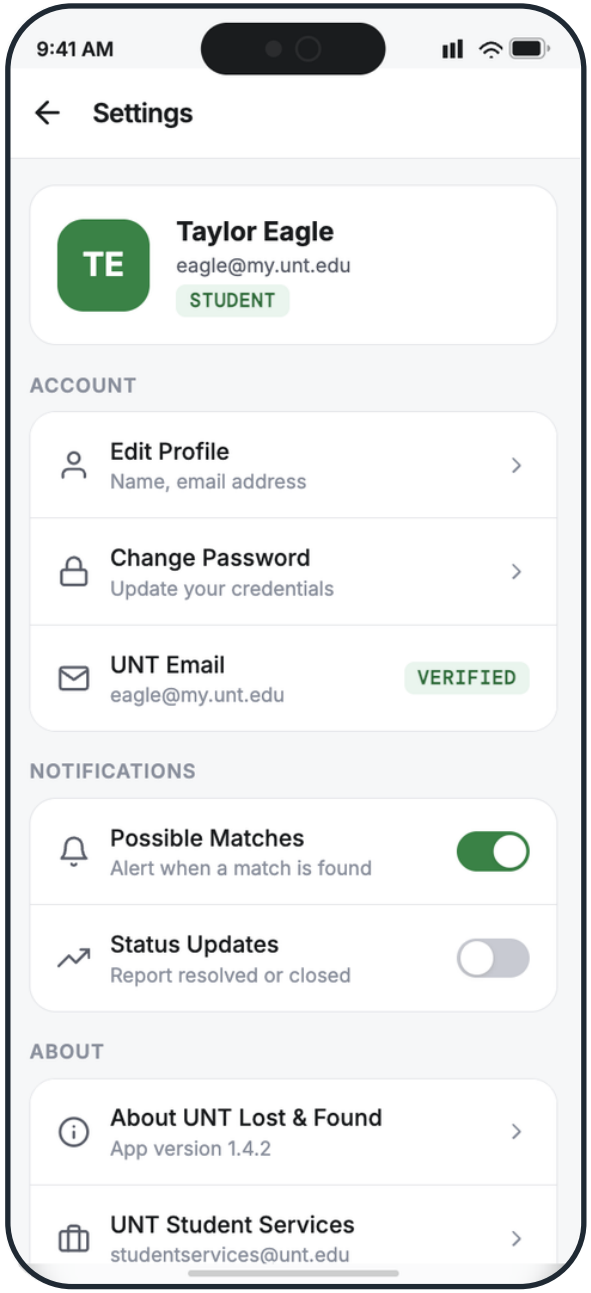

SCREEN 11

Settings

WIREFRAME

FINAL APP UI (SCREENSHOT)

PURPOSE

Account and notification preferences.

ON THE SCREEN

- Account information (name, UNT email)
- Notification toggles labeled ON/OFF in text
- About and Log Out

NAVIGATION

Log Out > 01 Login. Bottom navigation reaches every main screen.

UX AND ACCESSIBILITY

Toggles use a text label as well as position and color. Log Out is separated at the bottom to prevent accidental taps.
